## SUMMARY

The Overall score represents the overall health of the network. The score is influenced by the results of different services that are delivered below.

Services Delivered	Score
Asset Management	98%
Monitoring	59%
Patch Management	11%
Software Management	0%
Antivirus	100%
Average Score	53%

### Asset Management

The Asset Management score represents the capability of the network to function as is required by today's standards. Compliancy checks are made against the device to ensure devices meet the set criteria. Included in the checks are Warranty Status, Disk Capacity, Memory Capacity and if the Operating system is still supported.

### Monitoring

The Monitoring score is influenced by the open monitoring alerts for the network. The total number of open alerts influence the score, a higher priority is reflected by a increased weight in the calculation. A lower score means that issues are seen but have not yet been resolved.

### Patch Management

Regularly installing Microsoft Updates is essential for keeping the network secure. The Patch Management score represents the current state of Microsoft Updates in the network.

### Software Management

Keeping commonly used 3rd party software applications updated significantly helps keeping the network secure. Attackers often try to exploit security vulnerabilities in these applications. This score indicates the compliance level of the managed devices.

### Antivirus

An Antivirus product on all devices is essential for keeping the network protected against malware and other threats. The Antivirus Score represents if the Antivirus solution is installed, running and up to date on all devices.

### Proactive Maintenance

Any network requires proactive maintenance to ensure its availability, security and performance. The report contains a list of regularly scheduled automated activities. No score is calculated based on these activities.
